# ACCESS Twine for TV Operators

New Apps and New Revenue Opportunities

ACCESS Twine4TV Operators (T4TO) enables TV Operators and Telcos to expand their content portfolio with new Apps and Services and increase ARPU through our "super bundling".

ACCESS T4TO supports apps, subscription and advertising supported services, such as Free Advertising Supported Television (FAST) channels and Advertising Video on Demand (AVOD).

AAA Gaming

AAA cloud hosted blockbusters to casual fun games for all the family, plus. users can bring their own credentials.

Music & Karaoke

Over 200,000 radio stations and podcasts and thousands of Karaoke songs to sing along to.

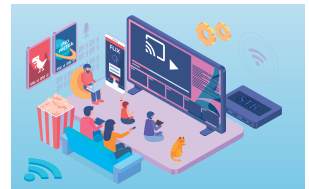

Video Services

Enjoy TV shows or a night at the movies through apps or metadata integrated directly into the operator user experience.

ACCESS Twine for TV Operators

Delivering Services for New and Old STBs

T4TO utilizes cloud management, packaging and metadata aggregation with provision of apps and services through a unified API. The Twine Standard Client (TSC) enables service providers to quickly realise their own UI/UX vision.

Legacy Device Refresh
Twine Micro Client (TMC) reduces CAPEX through our innovative cloud architecture, allowing connected apps to be executed with much less device resources breathing new life into existing connected STBs.

Any OS
T4TO is compatible with all major STB operating systems, including Linux, RDK, Android AOSP and Android TV. Adding services is as simple as adding the relevant Twine client module to your STB BOM.

Open Internet Browser
Delight your customers by enabling Internet without leaving your service. OIB can be fully open or present an operators curated selection of websites in a walled garden.
